

Gira ClassiX

Elegant. Classic. Perfectly designed.

With its perfected surfaces and harmonious rounded corners, the Gira ClassiX switch range sets new standards for stylish and classic interiors in an exclusive design. Cover frame variants in glossy gold brass, brushed bronze or glossy silver chrome are available to match the ambiance, both completely in metal and in combination with black or cream white inserts.

In the ClassiX Art design line, the frames which feature high-quality processing are finished with artistic detailing. The delicate lasered-in details set attractive accents.

Gira ClassiX

Brass

With perfected surfaces and a warm glossy gold, the brass variants of the Gira ClassiX switch range create an atmosphere of elegance and luxury. Whether entirely in brass or combined with elements in black or cream white – the elaborately worked frames are ideal for use in stylish, classic interior decoration. The brass nuances feature subtle variations which give each switch its own unique character.

Bronze

The warm colour tone and the silky feel of the surface give the bronze variants in the Gira ClassiX switch range an elegant, high-quality character. The cover frames are perfected carefully by hand, which provides them with a visible grained structure that makes each one unique. Cover frame variants entirely in bronze or combined with black or cream white elements are available to match the ambiance.

Gira ClassiX

Chrome

The glossy silver chrome variants of the Gira ClassiX switch range are fascinating due to their cool appearance and fine light reflexes. Whether entirely in metal or combined with elements in black or cream white, the high-quality frames feature brilliant and yet discreet aesthetics which are especially underlined in classic-modern room concepts. The reflecting chrome surfaces are distinguished by their individual shading which makes each switch an exclusive.

A wide range of functions

More than 300 intelligent functions

The traditional appearance of the cover frames is elegantly complemented by the state-of-the-art technology. More than 300* functions for comfortable, economical and safe living can be integrated in the Gira ClassiX switch range – from socket outlets to door intercoms up to the numerous components for intelligent building control with a KNX system.

Gira door communication system

Socket outlet, light switch and the intercom system at the front door in the same switch range – the door communication system from Gira offers all this. The product range includes a wide selection of video and audio home stations with hands-free speech function or receiver. In addition, a variety of products are available for outdoor use, such as stainless steel door stations in the TX_44 switch range as well as integration solutions for columns or letterbox systems, including from RENZ.

Inscription for various Gira products can be designed in just a few steps with the Gira Inscription Service. The professionally inscribed rockers or inscription holders for push button sensors, home and door stations as well as LED orientation and signal lights can be easily ordered online. Rockers made of brass or bronze are given special laser inscriptions. For additional information, see www.marking.gira.com.

Gira blind control system

Whether with the press of a button, with the time clock or within the Gira KNX system, Gira offers numerous solutions for the daily raising and lowering of blinds, shutters or awnings. For example with a random time control which simulates presence during holiday periods or an Astro program which remembers when the days get longer in the summer and shorter in the winter.

Gira Keyless In

As a stand-alone version or integrated in the Gira door communication system, Gira offers three products for access control without traditional keys. Either per fingerprint, number combination or card, Gira Keyless In opens doors wherever entry is only limited to certain people: at the house entrance, plant rooms or as access to a department.

Gira audio systems

Enjoying music in any room – Made possible by Gira. Individual solutions can be realised according to customer wishes with the Gira RDS radio, the integration of the Revox multiroom system in building technology or thanks to diverse connections. For example, these solutions encompass convenient music control everywhere in the home, announcements and piped-in music in the waiting rooms of doctors' practices or background music in boutiques.

Over 100 years of tradition and innovation

From a switch manufacturer to a system supplier

The roots of the German family-run company Gira extend back to 1903. Richard Giersiepen constructed a further development of the then-common toggle switch and applied for a patent. Two years later he founded a company together with his brother Gustav to introduce his invention and other parts for house installation to the market. With it in 1905, the Giersiepen brothers laid the cornerstone for over 100 years of successful company history and the continuous further development from a switch manufacturer to a system supplier for intelligent building technology. Today, Gira is led by the fourth generation of the family.

Quality and innovation

From the beginning Gira has relied on quality – not only regarding materials and processing. Optimisation and advancement have always played a central role in the entire product range, as in the initial patent application. This is indicated by numerous innovations with which Gira has decisively shaped the market for building technology for more than a century. In 1960, Gustav Giersiepen's grandson revolutionised the entire field with a modular system for switches, push buttons and cover plates. In the 1990s, Gira tapped the still-young field of intelligent building control

and set a milestone in 2008. With the Gira Interface, an intuitive user interface was introduced for the Gira HomeServer, the on-board computer for the intelligent house – optimised for a wide variety of operating devices such as the Gira Control Clients, smartphones, tablets and the computer. A year later, Gira received the renowned Plus X Award for the most innovative brand in the home technology field.

Award-winning design

In addition to the most demanding requirements on quality and function, the topic of design has a long tradition at Gira. With the S-Color switch range, Gira was one of the first manufacturers to introduce cover frame variants in various colours in the mid-1980s. It was presented with several design awards and remains a permanent part of the range today. The subsequent switch ranges also regularly receive awards in international design competitions such as the red dot design award and the iF product design award. However, not only the harmony of material, colour and form distinguish the design concept from Gira. Due to the seamless integration of innovative functions such as door intercoms, audio systems and components to control intelligent building functions in the Gira switch ranges, Gira sets new standards regarding a comprehensive product design.
